Abstract	iii
Prefazione	vii
1. The aggregate approach to innovation diffusion: the Bass Model	1
1.1 Introduction	1
1.2 The Bass model	7
1.2.1 Solution of the Bass model	9
1.3 Implementation of the Bass model	13
1.3.1 A standard Bass model for the diffusion of a new pharmaceutical drug in Italy	16
1.3.2 Modelling the diffusion of photovoltaic energy in Japan with a BM	19
1.4 The introduction of marketing mix variables: the Generalized Bass Model, GBM	22
1.4.1 A GBM with one exponential shock: the diffusion of photovoltaic energy in Germany	26
1.4.2 A GBM with three exponential shocks: the case of world oil production	30
1.5 Modelling diffusion across space and time	34
1.5.1 Cross-country and spatial diffusion	34
1.5.2 Some aspects on diffusion across generations of technologies	36
1.6 Refinements and extensions of the Bass model: some directions of research	38
2. Individual level diffusion models: the Cellular Automata approach	43
2.1 Introduction	43
2.2 Cellular Automata models	48
2.2.1 An explanatory example: innovation diffusion in a simple CA	51
2.3 A probabilistic Cellular Automata for diffusion of innovations	55

2.4	Modelling the diffusion of services	60
2.4.1	An innovation diffusion model with exit rules: the BFG model	62
2.4.2	Solution of a perturbed BFG	64
2.5	Final remarks and discussion	66
3.	Modelling a dynamic market potential as function of knowledge in innovation diffusion	69
3.1	Introduction	69
3.2	Absorptive capacity: a rationale for a dynamic market potential	73
3.3	Collective knowledge as an evolutionary network	75
3.3.1	A Network Automata model	77
3.3.2	Defining a variable market potential (or carrying capacity)	83
3.4	An innovation diffusion model with a variable market potential	86
3.5	Statistical implementation and applications	87
3.6	Empirical applications	90
3.6.1	Successful viral marketing: the case of Hotmail	91
3.6.2	The diffusion of a pharmaceutical drug in Italy	97
3.7	Concluding remarks and further research	102
4.	Network externalities and other perspectives of research	105
4.1	Introduction	105
4.2	Critical mass and threshold models of collective behaviour	108
4.3	A variable market potential as function of thresholds	111
4.3.1	An innovation diffusion model with network externalities	113
4.4	Discussion and further directions of research	116
